■ Installation Manual

◎Cautions

- Central DALI power supply rated at 240mA(DALI standard allows max.250mA).
- The controls interface of a DALI ballast normally source<2mA,with 64 individual addresses this will source 128mA. The remaining 112mA can be used to power other DALI controls without an internal power supply such as the DALI GC and DALI SC.
- DALI signals are not SELV.Therefore the same procedures should be applied as working with mains voltage.
- Individual DALI circuits must not exceed 240mA.
- The maximum cable length of the DALI signal wires must not exceed 300m or drop more than 2V on the signal line voltage.

■ System start-up timing

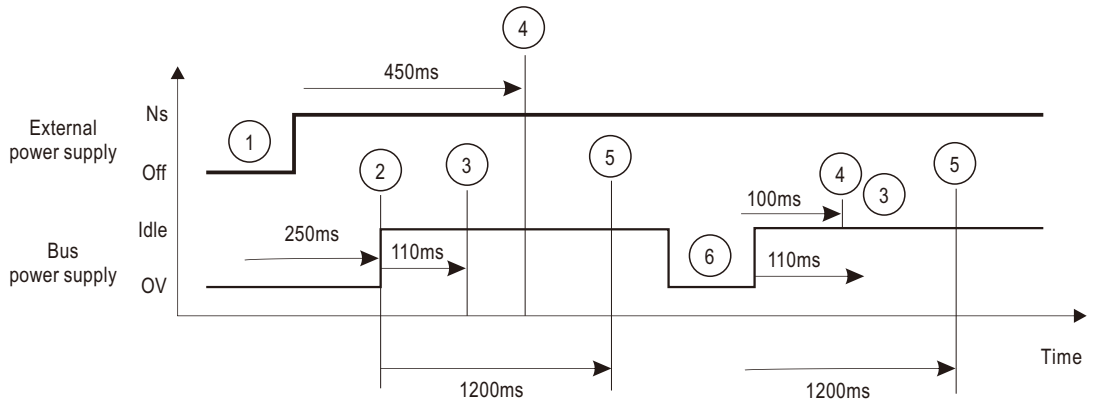

1.After external power-on ,timing of a bus power supply shall be as shown in table 1.
2.A receiver shall be ready to receive frames within the maximum receiver start-up time specified in Table 1.
3.A transmitter or a multi-master transmitter shall not start transmissions earlier than the transmitter start-up time specified in Table 1.

◎ **Table 1 – Start-up timing**

	Minimum	Typical	Maximum	Condition
Bus power supply start-up time			250ms	Guaranteed supply current reached
Advanced bus power supply start-up time			400ms	
Integrated bus power supply start-up time			400ms [a]	
			5s [b]	
Receiver start-up time for externally powered bus units, after external power cycle			450ms [e]	
Receiver start-up time for externally powered bus units, after bus power down			100ms	U=10V [d]
Receiver start-up time after bus power down for bus powered bus units			1200ms	
Transmitter start-up time	110ms [c]			
Multi-master transmitter start-up time	110ms			

a Applicable if other bus power supplies are allowed in the system
b Applicable if no other bus power supplies are allowed in the system.
c Not applicable for transmitters of bus units which cannot determine the bus state.
d Idle state, bus voltage measured at the interface of the bus unit.
e If an external power cycle occurred and the bus power is not available within 350 ms, the 100 ms timing is applicable.
